I have requested that a trained medical provider treat my facial lines with Botox Cosmetic. Botox, a neurotoxin produced by bacterium clostridium A, can relax muscles to areas of the face and neck which cause wrinkles associated with facial expressions. Botox Cosmetic is FDA approved to improve that appearance of vertical lines between the brow's and "crow's feet." In addition, other areas most frequently treated are: forehead lines, micro amounts to lower face and platysmas bands to neck.

Botox is diluted to a very controlled solution and when injected into the muscles with a tiny needle, it is almost painless. Clients may feel a slight burning sensation while the solution is being injected. You see benefits develop over three (3) to fourteen (14) days. The results last 3-5 months. With repeated treatments the results may last longer, with continued improvement of fine lines and wrinkles at treated area.

The most common side effects include: headache, respiratory infection, flu-like symptoms, temporary droop of eyelids. In addition, post treatment discomfort, swelling, redness and/or bruising may occur. Botox cosmetic should not be used if there is an infection at the injection site.

I understand there are no warranties or guarantees, implied or specific about my outcome. I have had the opportunity to explain my goals and understand which desired outcomes are realistic and which are not. All of my questions have been answered, and I understand the inherent (specific) risks of the procedure(s) I seek, as well as those additional risks and complications, benefits and alternatives. Understanding all of this, I elect to proceed. I have been advised of the risks involved and the expected benefits. I consent to treatment with Botox Cosmetic today and for all subsequent treatments. I understand the results are temporary and follow up treatment may be necessary for optimal results.

I am aware that I am not pregnant or lactating.

I authorize clinical photography only.
